ARE YOU AWARE

that DNS services constantly used for data breach, botnet C&C signalling and malware?

DNS service is critical infrastructure and an invaluable attack vector for intruders. Kamer IT Professional Service Team will examine your DNS services from the security point of view.

An internal client will be employed to target DNS queries from various attack categories will be analysed. Also our PS team will try to establish DNS tunnels to check if there is any side channel exists over DNS service for data exfiltration & infiltration.

Also our PS team will try to establish DNS tunnels to check if there is any side channel exists over DNS service for data exfiltration & infiltration.

Our PS Team will prepare a comprehensive report at the end of the service, which will include high-level and low-level of the findings and best practice recommendations for and unconfirming areas.

This will help best-of-breed configuration and future architecture decisions for your critical infrastructure services.
